PROFILE

M.Sc. candidate in Computing and Data Analytics with current AI/data work at Nova Scotia Health, plus 4+ years in enterprise software. Turns messy systems data into reliable reports and automated workflows using SQL, Python, Power BI, and Microsoft 365 Copilot/Power Platform.

EXPERIENCE

- AI & Data Analytics Intern** - Nova Scotia Health , Halifax, NS Jun 2026 - Present
 - Made finance and workforce reporting trustworthy by building an 8-stage Python and SQL pipeline with checks for joins, nulls, unmapped values, and totals.
 - Corrected a data-integrity issue that had inflated requisition counts by 5x, restoring numbers leadership could trust, by tracing the SQL join fan-out and rebuilding the query.
 - Cut an FTE reporting dataset from 207 MB to 1.09 MB while preserving full traceability to source data, by redesigning the aggregation logic.
 - Gave staff instant, plain-language answers to workforce questions, by building a decision-support agent in Microsoft 365 Copilot and Copilot Studio backed by SQL data.
 - Removed manual routing from Travel Authorization requests, covering approvals and notifications end to end, by automating the workflow in Power Apps, Power Automate, and Microsoft Lists.
 - Identified the more accurate forecasting method for workforce planning, by benchmarking baseline and ETS models in Python across 2,323 cost centres and 83,628 observation-months.
- Quality Assurance Engineer** - Mahak Accounting Software Co. Jul 2022 - Jun 2025
 - Cut manual release-testing effort by 40% while holding release reliability steady, by building repeatable validation checks in Azure DevOps CI/CD.
 - Reduced integration issues reaching production by 15%, by running 100+ API tests per release to trace backend and integration problems to root cause.
 - Gave product and development teams clear evidence to prioritize fixes, by turning recurring issues into 50+ structured defect and impact reports.
- Test Engineer** - Fara Resaneh Soroush (Vasni) Jan 2021 - Jul 2022
 - Kept releases reliable by investigating functional and integration issues across the application and confirming fixes with developers before each release.
 - Shaped two feature decisions, by collecting and synthesizing 200+ pieces of user feedback from product demonstrations into clear, recurring themes.

SKILLS

Data & BI: SQL, SQL Server, Python, Pandas, Power BI, Excel, relational data, joins/aggregations, data quality checks, reconciliation, traceability, dashboards, forecasting

AI & automation: Microsoft 365 Copilot Agent Builder, Copilot Studio, Power Apps, Power Automate, Microsoft Lists, RAG pipelines, ChatGPT, Claude

Business & systems: requirements gathering, process mapping, workflow analysis, UAT, root-cause analysis, stakeholder communication, technical documentation

Engineering & delivery: REST APIs, Postman, Swagger, Git, GitHub, GitHub Actions, Azure DevOps, CI/CD, Docker, Linux, Jira

EDUCATION & CERTIFICATION

- Master of Science in Computing and Data Analytics** 2025 - Present (expected Dec 2026)
Saint Mary's University, Halifax, NS | GPA: 4.04/4.30
- Bachelor of Science in Computer Software Engineering** 2015 - 2018
Khavaran Institute of Higher Education
- IBM Enterprise Design Thinking Practitioner** Dec 2025
