SUMMARY

M.Sc. candidate in Computing and Data Analytics graduating December 2026, with 4+ years across technical analysis, reporting, validation, and system delivery, including current hands-on data analytics work. Experienced with Python, SQL, Power BI, Excel, data pipelines, KPI-oriented reporting, data quality, and practical AI/ML workflows. Comfortable translating business needs into maintainable analytical solutions and supporting work from requirements and validation through documentation and ongoing improvement.

EXPERIENCE

AI & Data Analytics Intern

Nova Scotia Health, Halifax, NS

Jun 2026 - Present

- Built a multi-stage Python and SQL analytics pipeline with checks for joins, missing values, unmapped records, known totals, and output integrity, improving reliability of finance and workforce reporting data.
- Diagnosed a SQL join fan-out issue that inflated requisition counts by about 5x; corrected the logic and verified results before they reached decision-makers.
- Developed and benchmarked Naive, ETS, seasonal ETS, and Prophet forecasts using rolling-origin validation and multiple error metrics to compare model performance and communicate limitations.
- Built an AI-enabled analytical tool in Microsoft Copilot Studio and a Power Platform approval workflow, while standardizing supporting data processes and documentation for cross-team use.

Quality Assurance Engineer

Mahak Accounting Software Co.

Jul 2022 - Jun 2025

- Analyzed backend data flows and system integrations through 100+ API and structured checks per release, contributing to a 15% reduction in recurring integration problems.
- Automated repeatable validation workflows in Azure DevOps CI/CD, improving delivery efficiency by 40% and strengthening consistency across releases.
- Produced 50+ structured reports documenting root causes, recurring patterns, user impact, and recommended improvements for product, development, and design teams.

Test Engineer

Fara Resaneh Soroush (Vasni)

Jan 2021 - Jul 2022

- Reviewed application data and integration workflows for accuracy, documented discrepancies, and collaborated with developers to confirm corrected behaviour before release.
- Collected and synthesized 200+ pieces of user feedback during product demonstrations, identifying recurring themes that contributed to two feature decisions.

TECHNICAL SKILLS

BI & Reporting

Power BI, Excel (Proficient), KPI metrics, dashboards, structured reporting, stakeholder insights

Data Engineering & Analysis

Python (Pandas), SQL, SQL Server, ETL/data pipelines, data cleaning, data validation, APIs

AI & Statistical Analytics

Time-series forecasting, Prophet, ETS, model evaluation, rolling-origin validation, Copilot Studio

Delivery & Governance

Git, GitHub Actions, pytest, Azure DevOps, Power Automate, Power Apps, requirements gathering, documentation, data governance

EDUCATION & CERTIFICATION

Master of Science in Computing and Data Analytics

2025 - 2026

Saint Mary's University, Halifax, NS | GPA: 4.04/4.3

Bachelor of Science in Computer Software Engineering

2015 - 2018

Khavaran Institute of Higher Education | GPA: 16.14/20

IBM Enterprise Design Thinking Practitioner

Dec 2025

SELECTED PROJECTS & ACHIEVEMENTS

Applied Forecasting & Model Validation Pipeline

Built a Python forecasting workflow comparing Naive, ETS, seasonal ETS, and Prophet models with rolling-origin validation, multiple error metrics, data-quality guardrails, automated tests, and CI checks.

Cross-Database Migration and Anonymization Pipeline

Designed a 3NF schema and automated an ETL flow that cleans JSON data, loads it into MongoDB, and migrates it into MySQL through generated schema and insert scripts.
